Radon Program

List of Radon Mitigation Professionals

This following list contains the names of individuals or companies who have been trained according to the U.S. Environmental Protection Agency (U.S. EPA) protocols for radon mitigation. These individuals or companies listed are registered with the State of Connecticut Department of Consumer Protection (DCP) as Home Improvement Contractors and certified by one of the two National Radon Proficiency Programs; (1) The National Environmental Health Association (NEHA) and (2) the National Radon Safety Board (NRSB).

The State of Connecticut, Department of Public Health (CT DPH) is required under Connecticut General Statute 19a-14b, to “maintain a list of companies or individuals that are included in current lists of National Radon Proficiency Programs.” The CT DPH cannot be responsible for the knowledge or experience of these individuals or companies, nor for their fees or business practices. Inclusion on this list does not constitute an endorsement or a recommendation of the firms. People are encouraged to take normal consumer precautions before selecting a professional and be certain that the selected professional obtains all necessary building permits before proceeding with any work. You may visit the CT [ELicensing website](#) for more information regarding companies or individuals. Mitigation companies must utilize licensed electricians, plumbers, and other professionals for all applicable components of the work rendered.

Overview of Radon in Air Mitigation Techniques

If you have confirmed your radon in air level to be 4 picocuries per liter (pCi/L) or higher based on the average of two tests, U.S. EPA suggests that your home be fixed. There are several methods that a contractor can use to lower radon in air levels in your home. Some techniques prevent radon from entering your home while others reduce radon levels after it has entered. EPA generally recommends methods which prevent the entry of radon. Soil suction, for example, prevents radon from entering your home by drawing the radon from below the house and venting it through a pipe, or pipes, to the air above the house where it is quickly diluted. Refer to the U.S. EPA document, *Consumer's Guide to Radon Reduction*, for more information on radon mitigation systems, costs, and effectiveness. This document can be found on the CT DPH Radon Program website at www.ct.gov/dph/radon. You may contact the CT DPH Radon Program at (860) 509-7367 to request a copy of this document.

The cost of fixing a home generally ranges from \$800 to \$2500 with an average cost of \$1200. Some radon reduction systems can reduce radon levels in your home by up to 99%.

Overview of Radon in Water Mitigation Techniques

If you have tested your private well and have confirmed your radon in water level to be 5,000 pCi/L or higher based on the average of two water samples, CT DPH recommends that your home be fixed in one of two ways.

- **Granular Activated Carbon (GAC) System**

GAC systems are used to reduce radon levels that are between 5,000 and 10,000 pCi/L. This system uses special charcoal filters to remove radon from the water. You need to change the filter in this system according to the manufacturer's recommendations. The average cost for a GAC system is \$1500-\$3000.

- **Aeration System**

Aeration systems are used to reduce radon levels that are above 10,000 pCi/L. This type of system bubbles air through the water so that the radon is released into the air and vented away from your home. The average cost for an aeration system is \$3000-\$5000.
